

## IN THE SPECIFICATION

Please replace the paragraph beginning at page 5, line 11 (and ending at line 20), with:

~~As far as the not binding prototype of generator of coherent electromagnetic oscillations, the operation~~ The radio frequencies are comprised in the band of the 450-480 MHz and ~~in its~~ (i.e., MHz) multiples, i.e., ~~that is~~ 900, 1350, 1800 etc. with auto tuning possibility in plus or minus[[,]] for the detection of anisotropy of ~~biological organisms, and comprised in~~ ~~whichever portion of the electromagnetic spectrum for tests on any organized chemical~~ ~~system, parameters that could be varied from a case to the other in function of the~~ ~~composition of the materials to analyze.~~ The irradiated power from the invention is minimal, guaranteeing a low environmental, insignificant impact if compared in order of magnitude[[,]] to the field irradiated from a any cellular GSM telephone[[,]] (1 Watt vs. 1 mW of the ~~said~~ invention).
